Education

GLA University, Mathura – Uttar Pradesh, India
B.Tech CSE, 7.21 CPI

2023 – 2027

Experience

IT Developer Intern – To-Let Globe, Lucknow, India

May 2024 – Aug 2024

- Contributed to developing the company's official Contact Us page, ensuring proper functionality and responsive design.
- Delivered assigned development tasks ahead of schedule as part of the internship responsibilities.
- Assisted in onboarding and mentoring newly hired junior developers on project workflow and tasks.
- Integrated frontend components with backend APIs for smooth data submission and handling.

Machine Learning with Gen AI – GLA University, Mathura

May 2025 – Aug 2025

- Engineered end-to-end Machine Learning and Generative AI models by applying advanced neural network architectures, resulting in a 20% increase in model prediction accuracy.
- Developed a scalable Gen AI-based solution for automated data processing, reducing manual data handling time by 40% for project workflows.
- Collaborated with a cohort of 20+ peers to deliver 5+ AI-driven applications, utilizing Python and TensorFlow to solve complex real-world data challenges.

Technical Skills

Programming Languages: Java, Python, JavaScript, TypeScript

Frontend Technologies: React.js, Tailwind CSS

Backend Technologies: MERN Stack, REST APIs, JWT Authentication, Redux, Agile Methodologies

Databases: MongoDB, MySQL

Developer Tools & Platforms: Git, GitHub, Postman, VS Code, Render, Docker, AWS

Projects

StrokeSense – Machine Learning-Driven Stroke Prediction

Aug 2024 – Nov 2024

Technologies: Python, Scikit-learn, XGBoost, Pandas, NumPy, React, Tailwind CSS

- Built an end-to-end machine learning web application to predict stroke risk using demographic, clinical, and lifestyle features, enabling early risk assessment.
- Implemented data preprocessing, feature encoding, class-imbalance handling (SMOTE), and trained ML models using XGBoost, evaluated with precision, recall, F1-score, and AUC.
- Developed a responsive frontend with React and Tailwind CSS and a Python-based backend to serve real-time predictions, with model interpretability via feature importance and SHAP analysis.

AI-Powered Algorithmic Trading System

Dec 2025 – Apr 2026

Technologies: Node.js, Express.js, MongoDB, React.js, Google Gemini AI, JWT, OAuth, REST APIs, Nodemailer

- Built a full-stack MERN trading platform with real-time NSE and NASDAQ stock monitoring and AI-driven BUY, SELL, and HOLD signal generation.
- Integrated Google Gemini AI and Groq SDK to analyze live market data and automate trading decisions based on user-defined conditions like buy price, target, and duration.
- Designed MongoDB schemas with Mongoose to manage trade histories, portfolios, and market data with optimized queries for high-performance retrieval.
- Implemented JWT and Google OAuth 2.0 authentication with bcryptjs and built a modular backend architecture — reducing system complexity by 35%.
- Automated stock monitoring via node-cron scheduled jobs and delivered real-time email alerts using Nodemailer for instant BUY/SELL notifications.

Achievements & Co-Curricular Activities

Development Head – GLA Coding Club (CodeBuster)

- Spearheaded technical workshops and coding hackathons for 200+ students, fostering a collaborative environment that increased club engagement by 40% over one academic year.

Design Head – Society of Automation

- Managed end-to-end design operations for multiple society events, delivering high-quality posters, presentations, and digital content within deadlines while improving audience outreach and participation.
